There are 1,943 new codes and 422 code revisions to ICD-10-CM for 2017. Listed below are the new codes and revisions we believe are of most interest to pediatricians. Please see the 2017 ICD-10-CM Code Book for a complete list of new and revised codes.

Note that in ICD-10-CM, codes will no longer actually be deleted, but may be expanded to create more specific codes. (Example: K85.0 expanded to K85.00, K85.01, and K85.02. K85.0 would be invalid without the 5th character.)

Chapter 19 Injury, Poisoning and Certain Other Consequences of External Causes

Changes to “Injuries to Head” (S00-S09)

- New codes added to define laterality and encounter type under fracture of skull and facial bones (S02-)

- New codes added to define laterality and encounter type under dislocation of jaw (S03.01-) and sprain of jaw (S03.41-)

New codes for “Injuries to Ankle and Foot” (S90-S99)

“A” - initial encounter is used for each encounter where the patient is receiving active treatment for the condition.

“D” - subsequent encounter is used for encounters after the patient has completed active treatment of the condition and is receiving routine care for the condition during the healing or recovery phase.

“S” - is for use for complications or conditions that arise as a direct result of a condition, such as scar formation after a burn. The scars are sequelae of the burn.

When using 7th character “S”, it is necessary to use both the injury code that precipitated the sequela and the code for the sequela itself. The “S” is added only to the injury code, not the sequela code.
