Conference Purpose

Twenty-five percent of outpatient pediatric visits are for developmental or behavioral concerns. For example, 1 in 68 children have an autism spectrum disorder, and up to 17% of children have a developmental disability or behavior concern. Although developmental disabilities are common, the needs of these children can be complex. This conference will use an interprofessional approach to identifying and managing global developmental delay, autism spectrum disorder, intellectual disability, and behavior problems. We will also discuss the myriad of causes for intellectual and developmental disabilities, including congenital Zika. Patient- and family-centered care and web-based resources will be emphasized.

CME/CNE credits are available for physicians, psychologists, nurse practitioners, nurses, occupational therapists, physical therapists, speech-language pathologists, audiologists, and social workers.

Course Director:

Tyler Reimschisel, M.D., MHPE; Director, Vanderbilt Consortium LEND; Director, Division of Developmental Medicine and the Center for Child Development

This course is brought to you by the Vanderbilt Consortium Leadership Education in Neurodevelopmental Disabilities (LEND) Program in collaboration with Vanderbilt University School of Medicine, Department of Pediatrics, Center for Child Development; East Tennessee State University; and the State of Tennessee Department of Health
